PROFESSIONAL PROFILE

Software Engineer with 5+ years of experience turning complex operational and compliance rules into secure, production-ready software. At SigniFlow, delivers enterprise workflow and digital-signing capabilities across modern .NET and legacy platforms, owning work from investigation and architecture through deployment and production validation. Independently architects and ships full-stack products and client websites, including an AI-assisted women's safety platform governed by human moderation.

CAREER IMPACT

5+ years enterprise delivery | **15–20** merged PRs/month | **10–15** support tickets/week during rotations | **3** live full-stack products | **2** live client websites

CORE TECHNICAL CAPABILITY

Backend & Data: C#, .NET, ASP.NET Core, .NET Framework, REST APIs, Entity Framework Core, SQL Server, T-SQL, stored procedures, JWT, authentication and authorization.

Frontend & Product: React, TypeScript, JavaScript, Blazor WebAssembly, HTML5, CSS3, Tailwind CSS, MudBlazor, responsive component design and accessibility-aware UI.

Delivery & Enterprise: Azure DevOps, Git, GitHub, CI/CD, Docker, IIS, Netlify, Render, workflow automation, digital signing, API integration, reporting, root-cause analysis and production support.

PROFESSIONAL EXPERIENCE

Software Engineer | SigniFlow Pty Ltd | South Africa | February 2021 – Present

- Deliver enterprise workflow, document-management and digital-signing features across C#, .NET, ASP.NET Core, Blazor WebAssembly, React, SQL Server, VB.NET, ASP.NET Web Forms and PHP/Laravel.
- Design secure REST APIs, middleware services, authentication flows, stored procedures and business-rule enforcement for business-critical document lifecycles and integrations.
- Own complex investigations end to end, tracing failures across browser and network behaviour, application code, database state and external services before validating the production fix.
- Strengthened mobile signing security by scoping OTP validation to the document context, eliminating the risk created by globally matched six-digit OTP values.
- Diagnosed and corrected workflow-state inconsistencies where signatures were applied but database fields were not updated, restoring document completion behaviour and accurate user messaging.
- Extended field and document-processing capabilities, including mandatory and optional date tags, checkbox-group handling, responsive signing interactions and production reporting outputs.
- Average 15–20 merged pull requests per month and close 10–15 support tickets per week during assigned rotations while maintaining planned engineering delivery.

Freelance Software Engineer | Independent | Remote | 2026 – Present

- Partner with software professionals to transform CVs, project histories and career goals into responsive, recruiter-focused portfolio websites; own content structure, interface design, implementation, deployment and post-launch refinement.

Ndivhuwo Mathoma - Software Engineer portfolio | View live site

- Designed the information architecture and interface to present enterprise projects, technical capability and achievements with clear visual hierarchy across desktop and mobile.

Philip Baloyi - QA Automation Engineer portfolio | View live site

- Created a QA-focused portfolio that foregrounds automation, enterprise testing experience, tools and project evidence for recruiter scanning.

SELECTED SOFTWARE PRODUCTS

She for Her | AI-Assisted Safety Intelligence & Verification Platform | Live product

- Rebuilt an early concept into a scalable platform that combines community reports with structured information discovered from official court and policing sources.

- Designed a human-in-the-loop pipeline in which AI discovers, extracts and structures information while moderators retain responsibility for evidence review, identity risk, publication and rejection decisions.

- Implemented provider-based source ingestion, moderation queues, evidence management, source attribution, record-level audit history, role-based administration, intelligent search, original-source access and explicit identity limitations.

- Structured the platform so additional official providers can be added without rewriting the core moderation workflow, reducing future integration effort and manual data entry.

Stack: ASP.NET Core, React, Entity Framework Core, SQL Server, REST APIs, JWT, Tailwind CSS, AI-assisted extraction, Netlify.

OpsTrack | Incident Operations & Workflow Management Platform | Live product

- Built a workflow-driven operations platform covering incident intake, ownership, assignments, escalation, audit history, notifications and management reporting.

- Enforced lifecycle transitions and authorization server-side through a secured REST API, role-based access control, JWT authentication and a relational data model designed for traceability.

Stack: ASP.NET Core, React, Entity Framework Core, SQL Server, JWT, REST APIs, Docker, Netlify.

ShiftWise | Workforce Scheduling & Resource Planning Platform | Live product

- Built a scheduling platform for employees, skills, availability, shift requirements, generated schedules, coverage analysis and rule-violation detection.

- Designed the relational model and scheduling rules used to expose staffing gaps and conflicts, with independently deployed React client and .NET API applications.

Stack: ASP.NET Core, React, Entity Framework Core, SQL Server, JWT, REST APIs, Docker, Netlify, Render.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AI-103: Azure AI Apps and Agents Developer Associate - In progress

- .NET Core Mastery: Advanced Techniques for Experienced Developers - Coursera, 2026

- C# for .NET Developers - Board Infinity / Coursera, 2026

- Software Security, Cryptography and Hardware Security - University of Maryland / Coursera, 2020

- Operating Systems: Overview, Administration and Security - IBM / Coursera, 2020

- Java Programming: Principles of Software Design - Duke University / Coursera, 2020

SPAIN OPPORTUNITIES

Open to Software Engineer, Backend .NET Engineer and Full-Stack .NET roles in Madrid and across Spain. Based in Johannesburg and open to relocation. Contact me to discuss relocation and work authorisation requirements.
